## Scope of collection

The majority of the companies represented are located in the United States; international companies are located in Austria, Belgium, Brazil, Canada, China, Czechoslovakia, Denmark, England, France, Germany, East Germany, West Germany, Hungary, India, Israel, Italy, Japan,

Machine tools are machines that make parts and pieces for end products or other machine tools. These tools range from lathes, milling machines, grinders, manual and hydraulic presses, drill presses and saws to drills, mills, grinding wheels and cutting tools as well as measuring tools, jigs and fixtures. The machine tool industry evolved dramatically throughout the 20th century with the introduction of multi-function workstations. Multi-axis machines with attached tools changers are driven by sophisticated computer-controlled programs. The evolution of the industry is reflected, in part, in this historical collection of printed materials.
