Read collection overview

At the height of the antiwar struggle in the late 1960s, a group of scientists and engineers based in Cambridge, Mass., began to turn a critical eye on the role of their fields in the larger political culture. Calling themselves Scientists and Engineers for Social and Political Action (SESPA), the group took the slogan "Science for the People," which in turn became the name of their organization. With a collective membership that spread nation-wide, Science for the People was a voice for radical science and an active presence framing several of the scientific debates of the day. Through its vigorous publications, SftP explored issues ranging from the impact of military and corporate control of research to scientific rationalization of racism, sexism, and other forms of inequality; and they contributed to the discussions of recombinant DNA, sociobiology, IQ and biological determinism, women's health care, nuclear power, and the rise of biotechnology. Many members were engaged in supporting anti-imperialist resistance in Central America and Asia during the 1980s. The organization gradually waned in the 1980s and published the last issue of its magazine in 1989.

Donated by several members of the organization, the Science for the People collection provides a window into the organization and operation of a

collective devoted to radical science. In addition to meeting minutes and notes, and some correspondence, the collection includes a nearly complete run of the Science for the People magazine, and a substantial representation of the national and Nicaragua newsletters and topical publications. Photographs from the group's trip to China and other areas abroad in 1978 are available online, along with videos of the talks and sessions from a 2014 conference on the history and legacy of SftP.

Background on Science for the People

In the late 1960s, a group of radical scientists and engineers began to turn a critical eye on the role of their fields in the larger political culture. Calling themselves Scientists and Engineers for Social and Political Action (SESPA), announcing that "if you are tired of science for the pentagon or science for business, try science for the people." Their slogan "Science for the People" (SftP), became the name of their organization.

With a collective membership, decentralized, and little hierarchy, SftP was truly a grassroots organization, spawning chapters nationwide, usually based in research universities, though not limited to them. As Herb Fox, one of the group's founders noted, there was a vigorous debate in the early years of the organization over precisely what SftP should be: whether they should see themselves as engaged primarily in class struggle (in a Marxist sense) emphasizing the issues of science, as an organization devoted to using science in the interest of the people, or more generally as a group that would take a critical approach to examining the social and political impact of science and the misuse of science.

From these sometimes contentious beginnings, SftP emerged into a powerful voice for radical science, communicating its ideas through the bi-monthly magazine it published from 1970 to 1989 and a string of pamphlets and books on the major scientific issues of the day. In the 1970s and 1980s, members of the organization were influential in building opposition to military and corporate control of research and to scientific rationalization of racism, sexism, and other forms of inequality. SftP were indispensable participants in high-profile debates over recombinant DNA technologies; sociobiology, IQ, and biological determinism; women's health care; nuclear power; and the rise of biotechnology. Many of its members were engaged in supporting anti-imperialist resistance in Central America and Asia during the 1980s.

Although the organization gradually waned in the 1980s, publishing the last issue of its magazine in 1989, the issues it confronted have not. After a conference on the history of the organization was held at UMass Amherst in 2014, Science for the People has reorganized, with chapters reappearing at universities around the country including University of Michigan, MIT, and UMass Amherst.

Scope of collection

The Science for the People Records documents the organizational life, publication history, and research of the science activist group from 1966 to 1992, as well as a conference about the group held in 2014.

The collection contains a nearly complete run of the Science for the People magazine which was published bi-monthly from 1969-1989; in addition there are various publications about sociobiology, racism, sexism, and war. There are organizational notes, as well as national and regional newsletters from New York, Nicaragua, and Boston chapters. There are also subject files related to the organization's research pertaining to sociobiology, recombinant DNA, nuclear power, anti-war, and other topics. Photographs from the group's trip to China and other areas abroad in 1978 are available online, along with videos of the talks and sessions from a 2014 conference on the history and legacy of SftP.

The collection is organized into three series:

- [Series 1: Organizational Materials](#)
- [Series 2: Publications](#)
- [Series 3: Subject Files](#)

Series descriptions

[Series 1. Organizational Materials](#)

1970-2018
3 boxes

Series 1 contains documents related to the organization's day to day operations. There are meeting notes from the steering committee, board of directors, and various chapters. There are national newsletters and those for the Boston and Nicaragua chapters. It also contains promotional materials, correspondence between members, videos from a 2014 conference, and information about the Valentine and Unity Caucuses.

[Series 2. Publications](#)

1959-2004
3 boxes

Series 2 contains publications by Science for the People, and various regional SftP groups. This includes issues of the bimonthly SftP magazine from 1970-1989. There are also subject specific publications relating to topics including food resources, nuclear power, sociobiology, the military, and health care produced by the national SftP organization and local chapters.

[Series 3. Subject Files](#)

ca.1970-2004
4 boxes

Series 3 contains topical research for a variety of subjects which SftP published about or discussed. It contains information on China, food, energy, nuclear power, recombinant DNA, sociobiology, and war.
